DESIGN

GS63 is a high pressure rod seal that comprises of 3 elements; an energiser O-ring, a polyurethane shell and an monyte/motuf anti extrusion ring.

The inner lip of the seal is much shorter and robust and also provides an improved sealing and compression set characteristics.

GS63 provides flexibility for installation and responsiveness to the sealing lip. The energiser, ensures complete lip actuation under all pressure conditions and cushions the seal against shock loads.

FEATURES

- Excellent wear resistant
- Flexible easy installation
- High resistance to extrusion
- Wide temperature range
- Robust design

MATERIAL

Seal design comes in a variety of materials and sizes. For more information, please refer to MSDS datasheet

APPLICATIONS

Medium to heavy duty applications
